Fortinet's FortiMail Email Security System Earns 3rd Virus Bulletin VBSpam+ Certification in the Past Year for High Spam Catch Rate, Zero False Positives

Enterprise Email Security Solution Earns Its 30th Consecutive Virus Bulletin Antispam Award

SUNNYVALE, CA -- (Marketwired) -- 06/20/14 -- [Fortinet®](#) (NASDAQ: FTNT) -- the security innovator -- today announced the company's [FortiMail](#) messaging security solution has earned its third VBSpam+ certification, the highest achievable honor in comparative testing, in the last seven tests conducted by leading security magazine Virus Bulletin. Fortinet's FortiMail solution was recognized with the VBSpam+ award based on the software's high spam catch rate and zero false positives. Further, this is FortiMail's 30th consecutive Virus Bulletin Antispam award.

"It is no wonder (FortiMail) developers were confident enough to submit it so early on -- it has proved to be one of the better performing products in each test," said Martijn Grooten, anti-spam test director for Virus Bulletin. "In fact, with no false positives and a high catch rate, *Fortinet* achieves not just its 30th VBSpam award, but its third VBSpam+ award."

Virus Bulletin staff tested FortiMail along with 14 other antispam products from vendors around the world for spam catch rates, false negative and positives and low newsletter blocking rates. The test samples consisted of 143,245 emails, 131,030 of which were spam, all relayed in real time. FortiMail earned a total combined score of 99.87 out of a possible 100 and didn't block a single legitimate email.

"We're pleased to see the results of the Virus Bulletin test validate Fortinet FortiMail as highly effective and highly accurate at stopping spam," said David Finger, product marketing director at Fortinet. "Spam is the initial vehicle for many Advanced Persistent Threats and other stealth malware, which makes strong email security an important component of today's enterprise security solution. As with other security products and testing, the Virus Bulletin results (here as well as in their Reactive and Proactive antimalware testing) demonstrate Fortinet's commitment to exceeding independent, third-party benchmarks."

The FortiMail Advantage

The FortiMail family of messaging security solutions delivers proven, powerful messaging security features for any size enterprise, from medium businesses to carriers, services providers and large enterprises. Purpose-built for the most demanding networks, the FortiMail family utilizes Fortinet's years of experience to help protect high-volume service provider networks against spam, malware and other message-borne threats.

What sets FortiMail apart from competing email appliance manufacturers are its robust performance and deployment options as well as its malware detection technology, including the integration with Fortinet's new FortiSandbox appliance, all backed by the [FortiGuard](#) global threat research team 24/7/365.
