

Fortinet(R) Positioned in the Leaders Quadrant for Unified Threat Management

Evaluation Based on Completeness of Vision and Ability to Execute

SUNNYVALE, CA -- (MARKET WIRE) -- 03/12/12 -- Fortinet® (NASDAQ: FTNT) -- a world leader in high-performance network security -- today announced that the company has been positioned by Gartner, Inc. in the leaders quadrant of the "Unified Threat Management Magic Quadrant."

"Fortinet has been an innovator and leader in the unified threat management space for more than 11 years. As businesses and the threat landscape evolve, we continue to stay in front of the threats and deliver outstanding protection for our customers," said Ken Xie, founder and CEO of Fortinet. "Customers of all sizes understand the value of unified threat management because these types of appliances protect their networks while simplifying their IT environments, streamlining performance and lowering their total cost of ownership."

To be considered a UTM, security appliances must include a stateful firewall, remote access, site-to-site virtual private network support, Web security gateway functionality and network intrusion prevention, which are focused on blocking attacks against unpatched Windows PCs and servers.

Fortinet's FortiGate consolidated security platforms meet and exceed Gartner's definition. In addition to the required features, FortiGate security appliances deliver unmatched performance and protection while simplifying the network enabling multiple security functions to be managed in one console. FortiGate appliances and virtual appliances integrate the FortiOS™ operating system with FortiASIC™ processors to provide comprehensive, high-performance security. FortiGate appliances provide enterprise-class protection against network, content and application-level threats. Dynamic updates from Fortinet's FortiGuard Labs™ research team ensure FortiGate appliances are protected against the latest threats 24/7/365. Additionally FortiGate platforms incorporate sophisticated networking features, such as high availability (active/active, active/passive) for maximum network uptime and virtual domain (VDOM) capabilities to separate various networks requiring different security policies. About Fortinet (www.fortinet.com)

Fortinet (NASDAQ: FTNT) is a worldwide provider of network security appliances and the market leader in unified threat management (UTM). Our products and subscription services provide broad, integrated and high-performance protection against dynamic security threats while simplifying the IT security infrastructure. Our customers include enterprises, service providers and government entities worldwide, including the majority of the 2011 Fortune Global 100. Fortinet's flagship FortiGate product delivers ASIC-accelerated performance and integrates multiple layers of security designed to help protect against application and network threats. Fortinet's broad product line goes beyond UTM to help secure the extended enterprise -- from endpoints, to the perimeter and the core, including databases and applications. Fortinet is headquartered in Sunnyvale, Calif., with offices around the world.
